## PROFESSIONAL SUMMARY

Final-year Informatics Engineering student with hands-on experience shipping production-grade full-stack applications across two technology ecosystems: Laravel/PHP and Next.js/TypeScript. Built a production-deployed news portal with role-based editorial workflow and real-time trending analytics, a nutrition monitoring system for Indonesia's national free meal program handling 845+ food-composition records across 4 user roles, and a job-application tracker end to end secured with Sanctum and OWASP-aligned hardening. Seeking an internship or Junior Web Developer / Full-Stack Developer role.

## WORK EXPERIENCE

### Web Developer Intern

Jul 2025 – Aug 2025

Diskominfo Riau Province (Department of Communication & Informatics) • Pekanbaru, Riau

- Co-built "Master-Web," a reusable Laravel starter template now used as the base codebase for new web projects across the department.
- Delivered core modules: authentication, user and role management, base layouts, starter CRUD following MVC architecture under staff supervision, cutting setup time for new projects and keeping the codebase easy to extend.
- Applied clean, modular code structure and MVC architecture under staff supervision, ensuring extensibility for future maintainers.

### Media Staff, Tech Community

Sep 2024 – Aug 2025

IQ PRIMATECH Computer Science Club • Pekanbaru, Riau

- Produced social media content for web development classes, growing community engagement by roughly 20%.
- Co-organized 3+ workshops on web development, UI/UX, and cybersecurity, drawing 50+ participants per session.

## PROJECTS

### NewsPortal — Full-Stack CMS News Portal Jun 2026 – Present

<https://github.com/MohdFarhanS/newsportal>

Personal project • Next.js 15, TypeScript 5, Prisma 7, PostgreSQL, Auth.js v5, TanStack Query v5, TipTap 3, Zod v4, Tailwind CSS v4, shadcn/ui, Cloudinary, Resend, Upstash Redis, Vercel

- Built and deployed a production Indonesian news portal with a full multi-role CMS supporting 4 user tiers (USER, JOURNALIST, EDITOR, ADMIN) and a structured editorial workflow (DRAFT → REVIEW → PUBLISHED / REJECTED / SCHEDULED), enforced via Next.js middleware and Auth.js v5 JWT with per-request database re-validation.
- Engineered a real-time trending engine tracking article view counts per IP with 24-hour deduplication and a 7-day rolling window, alongside full-text search with category, tag, and date filters powered by Prisma query composition.
- Designed a normalized PostgreSQL schema across 9 models (User, Article, Category, Tag, ArticleView, Bookmark, ReadingHistory, etc.) with Prisma migrations, seed scripts, and dual-layer input validation using Zod v4 on the server and React Hook Form on the client.
- Applied production performance practices throughout: Turbopack builds, Prisma PG adapter for connection pooling, React cache() for memoized server queries, Upstash Redis for rate limiting, Cloudinary for image optimization, and Resend for time-limited password reset tokens.
- Live serve: <https://newsportal.my.id>

### Dashboard SPPG — Nutrition & Production Cost Monitoring System April 2026- Present

[https://github.com/MohdFarhanS/dashboard\\_sppg](https://github.com/MohdFarhanS/dashboard_sppg)

Final thesis project • Laravel, PHP, MySQL, REST API, Chart.js, Bootstrap

- Developed a monitoring system for Indonesia's Free Nutritious Meal (MBG) program, tracking nutrition and cost efficiency across daily menus for 12 demographic groups.
- Designed role-based access for 4 user types (Superadmin, SPPG Head, Nutritionist, Accountant), each with its own dashboard and permission scope.
- Implemented 5+ REST API endpoints for ingredient autocomplete, real-time cost calculation, and monthly trend aggregation, called via AJAX and Fetch API.
- Created a nutrition simulation engine that checks 8 nutrients against RDA standards with automatic status flags, replacing manual calculation entirely.
- Managed a normalized database of 845+ Indonesian food-composition (TKPI) records, with time-based pricing snapshots, automated Excel/PDF exports, and budget alerts.

### CareerFlow — Full-Stack Job Application Tracker Jun 2026

<https://careerflow.web.id>

Personal project · Laravel 12, Laravel Sanctum, MySQL, PHPUnit, React 19, Vite, Tailwind CSS

- Built a job-application tracker independently: Laravel 12 REST API backend, React 19 frontend, connected through Sanctum's cookie-based sessions and CSRF protection.
- Structured the backend with a Controller → Service → Model pattern across 20+ endpoints covering auth, applications, interviews, documents, and dashboard analytics, visualized on the frontend with Recharts.
- Hardened the API with rate limiting (5 req/min on auth, 60 req/min on protected routes) and 4 OWASP-aligned security headers; built a reusable React component library (9 primitives) and 6 custom hooks for data fetching, filtering, and pagination.
- Added document management for PDF CV uploads (5MB cap) and portfolio links, with automatic replace-on-duplicate so users don't end up with stale files. Validation runs on both ends: React Hook Form + Zod on the frontend, Laravel validation rules on the backend.
- Wired up a dashboard analytics endpoint that breaks down applications into 6 status categories plus monthly trends, then rendered it on the frontend with Recharts pie and bar charts so the user gets an instant read on where things stand.
- Backend: [github.com/MohdFarhanS/careerflow-backend](#) · Frontend: [github.com/MohdFarhanS/careerflow-frontend](#)
